- [Client Experience : Investor Psychology & Important Reminders](#)

- **14 Stages of Trading Psychology** – We were in a state of euphoria and many investors have recently experienced a shift to the panic/despondency stage. The course of the 14 stages can occur in a week, in a quarter, or even, in the case of recent events, one day.
- **Extreme Fear Driving the Market** - Extreme fear is currently driving the market with the Fear & Greed Index being at a 4. If you do not have cash needs, the best thing to do is to hold on to your current allocation. This is also an opportunity to rebalance for your long-term targets.
- **Intra Year Volatility** – Experiencing intra year volatility is a “normal” occurrence. The 2<sup>nd</sup> week of March is a usual time to experience lows. This was consistent with performance this past March. A more normalized return is anticipated after this period of tariffs.
- **Staying Invested for the Long Term** – If you invested \$100k in 2005 and kept it invested, your return would equate to \$717,046. If you missed just the best 5 days, this return drops to \$452,884. You can capture the best days by holding onto your investments and staying invested for the long term. When you sell, you are creating a new decision for yourself for when to buy back in which is just as difficult as deciding when to sell.
- **Stay the Course Amid Stock Market Volatility** – The 12 months after a decline can be a strong period to remain invested.
- **Average Investor Performance** – The average investor has an average return of 2.9% which is almost half the return of a 50/50 portfolio. This demonstrates the importance of having a long-term plan in place that you stick to.
- **Long-Term Perspective on Market Downturns** – If you can withstand bear markets, the non-bear markets have historically been very robust with stronger returns.
- **Declines & Recovery Expectations** – When corrections in the market happen, the average frequency of corrections -10% to -20% in the market is about every 2.9 years. The recent bear market, we experienced, -20% & over, has an average frequency of happening once every 6.7 years. The volatility we have experienced falls within these expected frequencies.
- **We Do Better When You Do Better**

- [U.S. Economic Data: Current State of the U.S. Economy](#)

- **Nominal and Real U.S. 10-Year Treasury Yields** – The nominal yield represents a pre-inflation return. The current 10-yr treasury yield has return of 4.23%. The real return, adjusting for inflation, is a little over 1% which is also before taxes.
- **U.S. Treasury Yield Curve** – In comparison to the yield curve of the beginning of the year. Short term interest rates remain elevated at 4.3%, but the rest of the curve differs. The 2 year is lower while going out 30 years the yield is higher. The 10year treasury this morning was 4.32%.
- **World Interest Rate Probability** – This gives us an indication of what markets anticipate will happen with regards to interest rates. Right now we are seeing a 69% chance that a rate cut will occur in June of about 25 basis points, an 83% chance in June, and 73% chance in July.
- **Current National Debt** – Interest rates impact our economy through financing our national debt. The national debt is currently \$36.7 trillion, with interest on the debt being over \$1 trillion. Lowering interest rates has a positive impact by lowering the cost of financing our debt.
- **The President's Federal Budget Proposal – Fiscal Year 2025** – Tax receipts are estimated to be \$5.5 trillion. The proposed budget includes spending of about \$7.2 trillion, causing a deficit of about \$1.781 trillion. Interest rates will have an impact on this deficit.
- **The Market Return Equation** – Market Return = Earnings Growth + Dividend Yield + Change in the PE Ratio
- **Large Cap** – Earnings expected to grow 9.36%. The PE ratio is 20.32, more reasonable than where it was last quarter because it is less elevated. Dividends are growing with yield at 1.5.
- **Mid Cap** – The is lower growth expectation for mid cap but they are less expensive. Earnings are expected a growth of 6.74%. The valuation is dramatically lower than Large Cap as seen by the lower PE ratio.
- **Small Cap** – The dividend yield of small cap is higher than large cap or mid cap, at 2.78.
- **Supertanker Economy** – It is difficult for the economy to turn negative. The vast majority of the economy is made up of consumption at 68.1%. Strength in employment rate places consumers in a position to spend.
- **S&P 500 Valuation Measures** – The valuation measures remain a little elevated compared to the 30-year average.
- **P/E Ratio and Equity Returns** – The PE ratio has dropped but remains positive, indicating more attractive returns.
- **Checklist: Optimal Recessionary Conditions**
- **Leading Economic Indicators**
